

Glencoe Regional Health decommissions its legacy

Healthland system on time and on budget with HealthData Archiver®.

CASE STUDY

Situation

Glencoe Regional Health (GRH) transitioned from its Healthland electronic medical record (EMR) to Epic in 2013. As some of the Healthland data was not able to convert to Epic, and in order to maintain HIPAA compliance, GRH needed to archive its Healthland data in perpetuity so patients could access their medical records.

GRH needed a partner that could decommission its legacy system reliably and efficiently, as well as deliver a solution that provided user-friendly access to archived medical records.

The GRH team interviewed and received demos from "many different vendors," shared Ryan Lake, GRH's Director of IT.

"Most of them charged based on data volume or for hosting and access," Lake continued. "Their payment models really didn't work for us. We needed an easy-to-use system that we could maintain long term without a huge expense."

Solution

Glencoe Regional Health partnered with Harmony Healthcare IT (Harmony) to decommission Healthland and archive its legacy data into HealthData Archiver®.

"Harmony was the one vendor that could promise a long-term solution without a huge expense," said Lake. "HealthData Archiver® was user friendly and intuitive, so we didn't have to put a lot of effort into learning a system being used for relatively few people."

Ryan Lake
Director of IT
GLENCOE REGIONAL HEALTH

"Harmony came in with a process and procedure that was more laid out and defined than most vendors that we work with. That process made archiving very simple for us.

Harmony would let us know what they were doing, but even more importantly, they'd let us know when they needed something from us and exactly what they needed from us... It was very low-impact for the resources on our side."

CASE STUDY

Solution, continued

In addition to being cost effective and user friendly, Harmony implemented the project to spec with very little involvement from GRH resources.

"Harmony requires very little effort from internal staff and the project is kept on time, on budget. There are few vendors that can produce what I need without a lot of time and effort from me – Harmony can," noted Lake.

About Harmony Healthcare IT

Harmony Healthcare IT is a legacy data management firm that archives patient, employee and business records. To strengthen care delivery and improve lives, we preserve vital information in a way that keeps it secure, compliant, accessible and usable. Since 2006, our team of experts has extracted, migrated and retained billions of records and petabytes of data from over 350 different clinical, financial and administrative software brands. That information is secured on our cloud-based storage platform, HealthData Archiver®.

Benefits & Results

Archive with an Audit Trail

"HealthData Archiver® tracks which medical records were released to which patients."

- R. Lake

Delivered on Time

Delivered Within Budget

"We had a few instances of scope creep, and each time Harmony said they could handle the change for zero cost."

- R. Lake

Great Experience with Harmony Staff

User Friendly

"I have only heard good comments in terms of how user friendly and easy the system is to work with."

- R. Lake
